

Example worming plans for adult horses

PLEASE NOTE, THESE ARE EXAMPLES OF POSSIBLE WORMING PROGRAMS THAT WE MAY RECOMMEND FOR ADULT HORSES. THE BEST PROGRAM WILL VARY FROM YARD TO YARD DEPENDING ON THE AGE AND NUMBER OF HORSES, THE TYPE OF GRAZING AND PREVIOUS WORM RELATED DISEASE.

Example 1) Simple worming for adult horses, with routine worming for tapeworm in the Autumn

Spring: (March, April, May)	Worm egg count every 2-3 months. Only worm horses with more than 300 eggs per gram.
Summer: (June, July, August)	Worm egg count every 2-3 months. Only worm horses with more than 300 eggs per gram.
Autumn: (September, October, November)	Treat all horses with Moxidectin and Praziquantal (e.g. Equest Pramox) once.
Winter: (December, January February)	No worming or testing required (unless on heavily grazed pasture all year, a very mild winter or any signs of disease)

Example 2) Simple worming for adult horses including tapeworm tests.

Spring: (March, April, May)	Worm egg count every 2-3 months. Only worm horses with more than 300 eggs per gram.
Summer: (June, July, August)	Worm egg count every 2-3 months. Only worm horses with more than 300 eggs per gram.
Autumn: (September, October, November)	Treat all horses with Moxidectin (Equest) Saliva test or Blood sample for Tapeworm- Worm horses with High levels of antibodies
Winter: (December, January February)	No worming or testing required (unless on heavily grazed pasture all year, a very mild winter or any signs of disease)
